DESCRIPTION

The Power On TS154G GYR telemetry system is engineered for motorsport applications, enabling reliable real-time data transmission. It features a compact and robust hardware design, seamlessly interfacing with the vehicle's control unit.

The TS154G supports both RS232 and Ethernet data streaming from the car. An integrated Ethernet switch allows multiple devices to be connected through a single port, simplifying integration within the vehicle network architecture.

4G connectivity ensures global coverage across a wide range of service providers, offering maximum flexibility and reliability in telemetry operations.

A distributed network of telemetry servers worldwide minimizes data latency, while optimized communication protocols and cloud infrastructure reduce data loss and enable real-time data sharing among multiple users, regardless of their location.
